

Round 4 results — Run udel\_fang\_nir submitted from udel\_fang

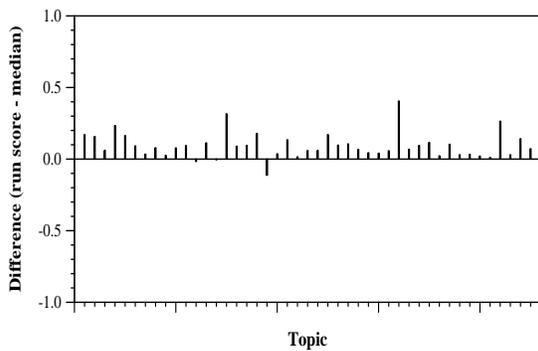

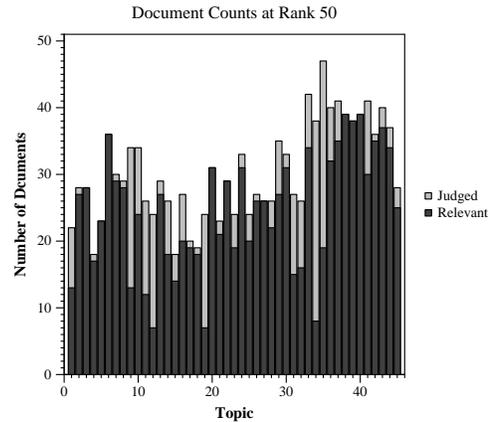

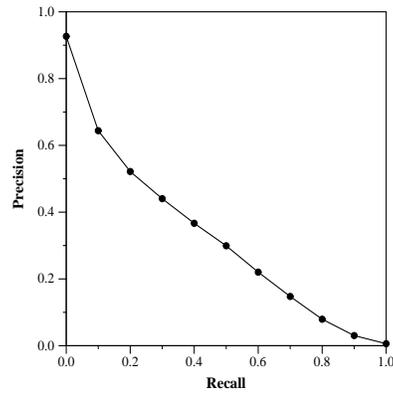

Run Description

We build an index with title and abstract from the metadata file. Non-stopwords in the query and entities tagged by SciSpacy in question and narrative fields are assigned the weight ratio of 2:3:1 to form the query. We generate a run using relevance feedback on the first 40 queries and pseudo relevance feedback on the last 5 queries. SCIBERT is used to re-rank the first 500 results. SCIBERT is finetuned on the whole msmarco datasets.
